keeping you happy

Data Standards portfolio boasts some of the industries top publishers, from which their flagship products have been placed.

We pride ourselves on continuing to supply a service that is **technology focused** and **competitively priced**, therefore providing you with a product that is time efficient whilst being flexible to adapt to your business needs.

Our standards support publishers with your ever growing need in finding ways to **produce more publications** with **lower costs**, improving the accuracy and consistency of your products, and significantly reducing their time-to-market, helping you achieve your goals.

Data Standards strives to understand your requirements and strongly believe that open communication can only help further build our relationship with you. **We have helped them, now let us help you.**

something extra

Our workflows set us apart from other suppliers, our experience in **typesetting** and **ebook production** is established and recognised as a **leading innovator** in the publishing industry.

Using professional tools, **XML** is at the heart of our production process, with publishers requirements in mind we have developed solutions that allow application binding with such products as **Microsoft Word**, **Excel** and **Access** to allow for true '**Single Sourcing**' where we accept these formats as inputs to the **XML workflow**.

This approach enables your straight forward publications, as well as complex titles produced by *Data Standards* to enjoy the benefit of having your respective publications **produced in XML**, without the usual associated editorial and conversion costs from the outset of the project, and continuing to keep your data '**future proof**'.

tick, tock, tick ...

Dedicated to increasing **quality** and **flexibility** in your publishing process, increasing **productivity** and **reducing your costs** is taken as read.

Data Standards analyse your business processes and identify repetitive and duplicated tasks that can be emulated by our solutions, automating any element of your production process adding **strict control** and **consistency** to your product, whilst allowing full manipulation of the traditional typography. Thus eliminating a large proportion of the manual time involved and giving you the precious **gift of time** that can be concentrated elsewhere in your business.

These solutions include customised **authoring tools** to assist with content generation, **bespoke publishing templates** designed to **automate the publishing cycle**, and fully automated publishing engines that can deliver products 24/7 'On-Demand'.

I want it now !

Data Standards offers you our unique state-of-the-art 'On-Demand' enterprise solution which enables you to have your data processed 24/7 at the press of a button from anywhere in the world.

This service is designed for **fast tracking** your publishing project, where multiple editors are possibly distributed over various locations but working together to tight deadlines to collaborate content on a large publication. As each element of content is completed the file is delivered to the *Data Standards* 'On-Demand' server, which processes the data and returns the desired format **within minutes**. The benefit is a single 'first and final' live production run, eliminating all intermediate typesetting stages.  **ON DEMAND**

time to move

We understand that moving the production of your publications can seem daunting, especially if you have been with your supplier for a while. So don't just take our word for it, our customers are more than willing to give **glowing references**, and these are available on request along with **documented working samples**.

Data Standards combine a wealth of knowledge in the full compliment of **typesetting services**, **ebook production**, **publishing solutions** and **template development** for sourcing and producing publications.

Data Standards listens to your requirements and provides a solution to suit your needs. Employing a **structured workflow** allows us to produce consistently styled, typographically correct pages at rates we're sure will be hard to mirror. **We will help you reduce your typesetting costs.**

make a call

Here at *Data Standards* we are always willing to discuss your requirements, no matter how tentative they may be. We understand that all the details may not be available and change has to start somewhere. **We will help get you moving.**
